# Joose Seppälä
Software Developer, Cooperative entrepreneurs

To my future workplace

Hi there!

I'm young man who is specializing to ICT sector and is eager to find nice workplace as trainee. I have started half a year ago my studies in JAMK UAS as a transfer student from Bachelor of energy engineering. I'm now aiming to graduate as a software engineer in few years and start working among software development. I'm interested in software development, project management, DevOps and especially working in a great team.

Now I'm looking for a summer job as a trainee as a programmer or working with projects. I'm a great choice to your company because I have widespread work experience which have given me lots of aspects and knowledge from different business areas. Also, I'm suitable for different kind of jobs because I have constant will to learn and develop my skills. My experience as cooperative entrepreneurs give me understanding about business logics and laws, so I have basic skills to run a small-scale company.
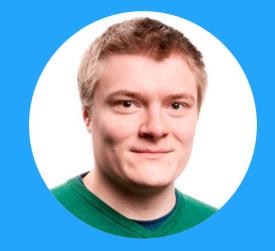

I am very happy to be interviewed or I can introduce myself more via video.

Best regards,

Joose Seppälä

Joose Seppälä

Software Developer, Cooperative entrepreneurs
